

VESSEL DESCRIPTION:

Aurora 1060D & 1060DV Series Tanks are ASME constructed, precharged expansion tanks. They are designed to absorb the expansion forces and control the pressure in heating/cooling systems. The system's expanded water is contained behind a heavy-duty diaphragm fully compatible with water/glycol mixtures, preventing tank corrosion and waterlogging problems.

The factory set precharge for these tanks is **12 psig (83 kPa)**.

CONSTRUCTION DETAILS:

Material	
Shell	Carbon Steel
Diaphragm	Heavy Duty Butyl
