

PATENTED AXIAL
CUTTER TECHNOLOGY

The Myers V2 series grinder is engineered from the ground up, in order to overcome the increased debris and higher pressure required in today's wastewater environment. It features a patented axial cutter design and semi-open impeller to effectively macerate challenging sewage solids into

- NEW! Optional quick disconnect cord available for ease of maintenance
- Cable jacket sealed by compression by compression grommet for double seal protection against water ingress
- Replace power cord without disturbing motor for ease of maintenance

- Constant bearing lubrication for long life
- High torque start/run capacitor for single or three-phase motors, assured starting under heavy loads

Corrosion resistant, reduces maintenance

- Absorb both axial and radial loads for increased durability

Superior motor protection

- Located in seal chamber instead of motor area for true early warning of water leaks. Allows corrective action before costly motor or bearing failure occurs.
- Activates warning light in control panel

Provides improved performance, resists clogging

- Pump-out vanes help keep trash from seal, reduces pressure at seal face for longer life

- Constructed of 440 SST hardened to 57-60Rc for long life

- Easily replaceable without dismantling pump

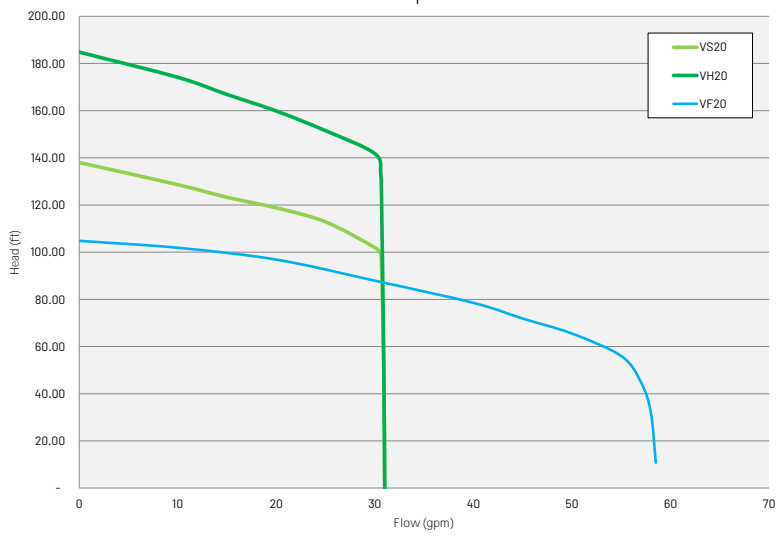

Discharge

1-1/4"
