The PENTEK INTELLIDRIVE Water Pressure Control Center is a "Variable Frequency Drive" that directs changes in submersible pump motor speed, responding to fluctuations in demand.

It maintains constant water pressure, regardless of how many people or appliances are using water at the same time.

You'll recognize the difference right away. Water pressure stays the same: in the shower, for the dishwasher...everywhere in the home. And when you're outside, you'll enjoy a lush, green lawn. Sprinkler systems will perform at their best, with consistent spray patterns and complete coverage.

"Soft Start/Coast to Stop" design minimizes stress on the pump motor, extending its overall life.

Your dishwasher and washing machine depend on adequate water pressure. PENTEK INTELLIDRIVE helps ensure that your dishes and clothes come out as clean as they can be.

A system equipped with PENTEK INTELLIDRIVE can use a smaller water pressure tank, so it saves space and money.

The PENTEK INTELLIDRIVE control features an easy-to-understand display of information that makes monitoring status and troubleshooting easy.

A GOODB E OLO I A E E E.

If you can't count on strong water pressure from your well system, it's a frustrating daily experience.

For example...

Inadequate pressure happens when the home's demand fluctuates.

For instance, if you're taking a shower, water pressure drops when someone starts the dishwasher or turns on a faucet.

Sudden demand from just one fixture or appliance produces a pressure drop in every other fixture or appliance in the house.

"What a difference! Before, we couldn't take a shower if the sprinkler or dishwasher were running. Now, we can do everything at the same time, and the water pressure's always great!"

"Our dishwasher wasn't getting dishes clean enough, and I thought we needed a new one. But the real problem was low water pressure, and since we added PENTEK INTELLIDRIVE to our system, our dishes come out sparkling clean."
